

MTA-15Z Meter Test Adapter

The MTA-15Z Meter Test Adapter is the perfect companion accessory to the PowerMaster line of Analyzing Reference Standards. It facilitates testing of ANSI socket based meters including transformer rated, self contained, single phase and three phase.

It features our newly engineered universal meter socket and communication platform that negate the need for current and potential jumpers which are generally needed with other test adapters. The MTA-15Z's portability and versatility allow it to be utilized at the metering site, in the van or truck, and even in the laboratory. Powermetrix has once again provided a product that is customer driven in its design and functionality. Let us show you how to increase efficiency and productivity by utilizing the MTA-15Z in your meter testing program.

Technical Specifications
